Genetic Testing

Food Safety

Foodborne pathogens are an important issue for food manufacturers.

Example of foodborne pathogen management among food manufacturers.

1. Decreasing the risk of food poisoning by combining tests for viable bacteria counts and the detection of food poisoning bacteria.
2. Rapidity and simplicity are key features for microbial tests adopted for the voluntary hygiene management of food processing factories.

Food allergy is an important issue for food manufacturers.

Example of food allergen management among food manufacturers.

1. Allergen advisory labeling: for allergenic ingredients, for possibility of cross contamination, etc.
2. Control of contamination: avoid contamination during processing.

*Cross contamination may occur during transport and storage of ingredients, manufacturing and processing, and packing of products.

Mycotoxins is an important issue for food manufacturers.

Example of Mycotoxins management among food manufacturers.

1. Mycotoxins are heat stable and thermal treatment during processing and preparation of foods cannot inactivate them. Appropriate risk management is required in each step of food supply chain (production and storage of field crops, processing, distribution, and consumption).
2. Aflatoxins are most toxic of all known mycotoxins and have carcinogenic effect on animals.
Various regulatory bodies (Codex, EC, US FDA, MHLW of Japan etc.) have set their regulatory limit for aflatoxins.

NH Foods Ltd. Research and Development Center

Research to Ensure Food Safety and Security

One of the missions of the NH Foods Ltd. R&D center is to ensure food safety. The R&D center has innovated food safety testing techniques based on immunotechnologies. Leveraging its food allergen test kit, it offers a variety of food test kits, including test kits for foodborne pathogens. Their performance has earned strong public recognition. They include a food allergen detection kit that complies with the guidelines of the Consumer Affairs Agency of Japan. Other examples are mycotoxin detection kit that complies with a notice from Ministry of Health, Labour and Welfare of Japan, and verotoxin test kit that is listed in another notice.

Foodborne pathogen test kits

by Immuno detection

“NH Immunochromato”

The ‘NH Immunochromato’ is a line of testing kits for easy detection of food poisoning bacteria and toxins in food products. These are used to increase the level of safety in factory produced food items and production lines.

‘**NH Immunochromato O157**’ has been certified as a Performance Tested MethodSM (PTM) by the AOAC Research Institute.

NH Immunochromato includes 8 kits designed for 7 food poisoning bacteria or verotoxin; *E. coli* O157, *E. coli* O26, *E. coli* O111, *E. coli* O103, verotoxin (VT1/2), Listeria, *Campylobacter* and *Salmonella*.

O26, O111, and O103: The only commercially available immunochromatographic assay kits

Verotoxin 1 & 2: Listed in the notice from the Ministry of Health, Labour and Welfare of Japan

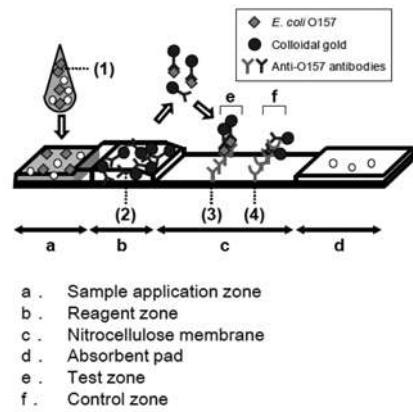

Foodborne pathogen test kits

NH Immunochromato

- Simple and rapid immunochromatographic assays
- One-step assay: Apply enriched samples to test strips
- Results in just 15 minutes
- O26, O111, and O103: The only commercially available Immunochromatographic assay kits in the world
- Used widely in Japan.

Principle of assay

1. When a sample solution is applied to the sample application zone of the test strip, it is wicked through reagent zone.
2. Target pathogen/toxin (1) in the sample binds to the colloidal gold-labeled antibody (2) in the reagent zone.
3. The pathogen-antibody complex flows through the nitrocellulose membrane which contains a zone of antibody specific to target pathogen/toxin.
4. The immune complex is captured and concentrated in the zone (test zone) (3), eventually forms a reddish purple line.
5. The membrane also contains a control zone where the gold-labeled antibody is captured.
6. The control line forms in the control zone (4) regardless of the presence of target pathogen/toxin in the sample solution. The control line ensures the test is working correctly.

Kit contents

| | |
|-----------------------------|-------------------|
| A : Test strip | 2 tests ×10 packs |
| B : Instruction manual | 1 |
| C : Plastic bag with zipper | 1 |

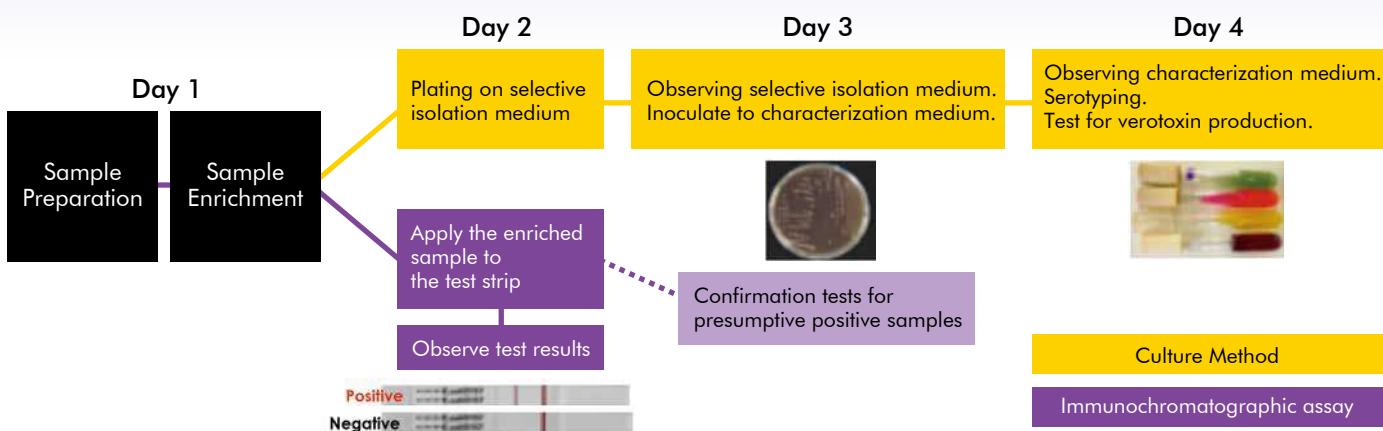

Additionally required materials and instruments

1. Enrichment broth
2. Stomacher and stomacher bags (preferably with a filter)
3. Autoclave
4. Incubator
5. Balance (capable of weighing 25 g)
6. Disposable plastic transfer pipettes and/or appropriate micro pipettes and disposable tips
7. Timer
8. Disposable polypropylene tubes for sterilization of samples (optional)

Storage and expiration date

- 1) Storage: Store at 2–8°C under protection from the light. Avoid freezing.
- 2) Expiration date: 12 months from the date of manufacture.

Comparing operational procedure with culture method (Detection of E.coli O157)

Test procedures (Detection of E.coli O157)

Step 1: Sample enrichment

Add enrichment broth to weighed food sample and homogenize. Incubate the homogenized sample at 42°C for 18-24 hours.

Step 2: Application to test strip

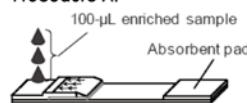

Procedure A:

Place a test strip on flat surface and apply 100 µL of the enriched sample to the sample application zone.

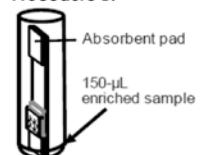

Procedure B:

Transfer 150 µL of the enriched sample into a test tube. Put a test strip in the test tube immersing the sample application zone in the sample.

Procedure A:

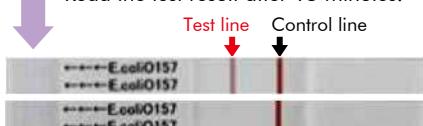

Procedure B:

Step 3: Observation of the test results

Read the test result after 15 minutes.

Positive results: Reddish purple lines appear in the test zone and the control zone in 15 minutes after application of sample solutions.

Negative results: A reddish purple line appears in the control zone.

*Invalid results: No reddish purple line appears in the control zone.

Fecal pretreatment reagent kit for Immunochromato “POTAT”

- This kit inhibits non-specific reactions caused by poultry feces-derived materials, minimizing the number of false positives.
- Tests can be conducted directly on fecal sample. Enrichment is not required.
- This kit enables on-site testing in farms and poultry meat processing facilities.
- The protocol is easy to perform. No special equipment is required.
- Only 1 hour from sample collection to results.

Foodborne pathogen test kits by PCR and DNA chromatography

GeneLine

- These test kits are reagents for laboratory use, combining the PCR (polymerase chain reaction) and nucleic acid chromatography.
- Results can be obtained faster than with the culture method.
- Sensitivity comparable to the culture method.
- Post-PCR operations are simple (no need for agarose electrophoresis).
- Nucleic acid chromatography enables visual detection of target genes.

Microbe test media, culture substrates and testing kits

Microbe test media and culture substrates

Kabicidin

This product, created by the Takeda Pharmaceutical Company Institute for Fermentation (Patent number 247306), is an antibiotic extracted from the bacterial culture medium of *Streptomyces gougerotti*, which selectively inhibits the propagation of fungi such as mold and yeast while bacterial reproduction remains unaffected.

Anti Fungus Culture Medium "DAIGO"

This product consists of the anti-mold antibiotic Kabicidin (Patent number 247306), and is a powder medium that selectively inhibits the propagation of fungi only, such as mold or yeast. Thus, this product can be effectively utilized in industries that use mold and yeast.

HIPOLYPEPTON Series

In Hipolypepton Series from Nihon Pharmaceutical, 'Hipolypepton' made from casein and 'Hipolypepton S', 'Hipolypepton N' and 'Hipolypepton NS' made from soybeans are currently available. This series is a dried, purified powder, created from raw materials that have undergone enzymatic degradation. The casein sodium, the basic ingredient of 'Hipolypepton' (the casein-made peptone), that is used is exclusively from New Zealand, a country without incidence of BSE outbreaks.

Food Allergen Screening Test Kit “FASTKIT”

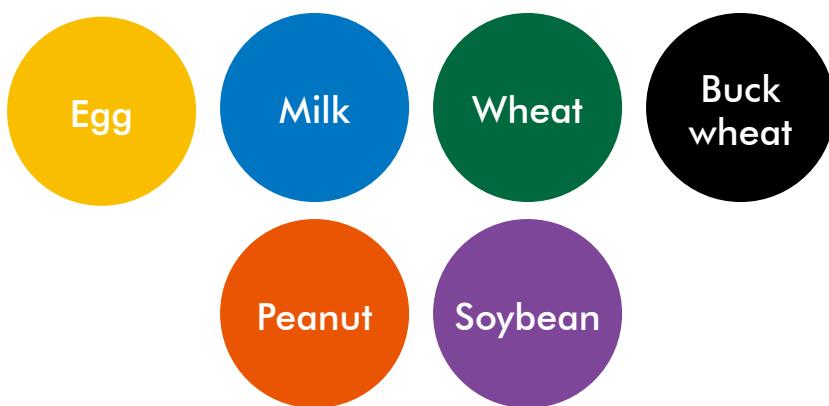

FASTKIT ELISA Ver. III

These ELISA kits are a food allergen screening test kits which can detect allergens in foods. This product series complies with the guideline in CAA* Notice No. 36 dated March 26, 2014, “Test methods for food products containing allergic substances”. These kits are capable of precise quantitative detection of allergen in various samples such as raw materials and processed foods.

* Consumer Affairs Agency, Government of Japan.

FASTKIT Slim

In the management of food allergens, the prevention of unintended incorporation (contamination) is vital in the manufacture and preparation processes of food products. In particular, the cleaning and cleansing of machinery and equipment used in the manufacture and food preparation process are essential. The swab test using FASTKIT Slim is effective in ensuring that the cleaning and cleansing are completed adequately.

FASTKIT

Test Kits for Food Allergens

FASTKIT ELISA and Slim

Two types of test kits to fit for your purposes

For
quantitative
analysis

FASTKIT ELISA Ver.III

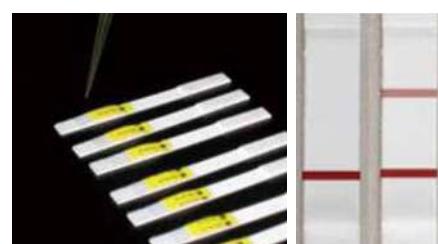

- ▶ High sensitive quantification.
- ▶ Applicable for processed foods.
- ▶ Used widely in Japan.

For
qualitative
analysis

FASTKIT Slim

- ▶ Screen samples for food allergen in 15 minutes.
- ▶ Reliable detection with simple handling.
- ▶ Clear interpretation of the results.

FASTKIT ELISA Ver.III

FASTKIT Slim

FASTKIT ELISA Ver.III

"Visualization" of residual allergen using FASTKIT Slim

Swabbing tests: check for cleanliness after washing

- Raw eggs in bowls were beaten with chopsticks.
- The bowls and chopsticks were washed using sponges with water or detergent
- Swabbing tests were performed after each wash.

| | Before wash | After washing with water | After washing with detergent |
|-----------|-------------|--------------------------|------------------------------|
| Bowls | + | + | ± |
| Chopstick | + | + | + |
| Sponges | Not tested | + | - |

FASTKIT Slim

- Washing with water was inadequate to wash egg proteins off.
- Egg proteins were detected in the sponges used in washing with water.
 - ➡ Suggests a contamination risk from the equipment used for cleaning
- Egg proteins remained on the surfaces even after washing with detergent.
- Egg proteins possibly remained in non-slip slits on the tips of chopsticks, because small grooves are hard to be washed.

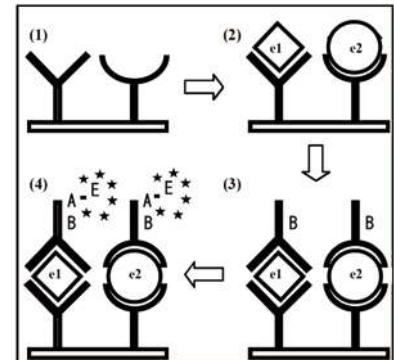

Test Kits for Food Allergens

FASTKIT ELISA Ver.III

- High sensitive quantification.
- Applicable for ingredients of processed foods.
- Used widely in Japan.
- Complies with the guideline in the notice from the Consumer Affairs Agency of Japan.

Principle of assay

- (1) Antibodies binding to multiple proteins of allergen are immobilized on the surface of wells.
 - (2) Multiple proteins of allergen (e1, e2...) in the sample solution binds to the antibodies.
 - (3) The biotin-labeled antibodies bind to the already bound protein, forming "sandwich complexes".
 - (4) The streptavidin-peroxidase conjugate binds to "sandwich complexes" through the biotin-streptavidin interaction.
- Addition of the substrate solution (TMB) enables colorimetric analysis.

Objective/performance

- Intended for qualitative detection of allergen proteins in food products (or solution)
- Quantitative limit: 0.78 to 50 ng/mL (standard protein)

Kit contents

- A : Microplate coated with antibodies (with lid)
- B : Standard solution (50 ng/mL)
- C : Dilution buffer
- D : Biotin-labeled antibody
- E : Streptavidin-peroxidase conjugate
- F : Substrate solution (TMB)
- G : Stop solution (0.5 N H₂SO₄)
- H : Wash buffer concentrate (10 times concentrated)
- I : Extraction buffer concentrate 1 (20 × concentrated)
- J : Extraction buffer concentrate 2 (20 × concentrated)
- K : Extraction buffer concentrate 3 (20 × concentrated)

Additionally required materials and instruments

[Preparation of standards and buffers]

- Measuring cylinders, beakers, micropipettes, and disposable tips.

[Preparation of sample solution]

- Utensils to homogenize sample (grinder, mixer mill, etc.), balance, 50-mL plastic centrifuge tubes (with cap), shaking machine, centrifuge machine (recommended: capable of 3,000×g or higher at room temperature), filter paper, and funnel.

[Assay and data analysis]

- Micropipette, disposable tips, test tubes or micro tubes, blotting paper (paper towel), micro-plate reader (capable of reading at 450 and 600 - 650 nm), and analytical software (capable of 4-parameter analysis)

Note) Prevent contamination through experimental instruments: use disposable lab supplies, use of instruments which are not used for other purposes is recommended. In case the instruments used for other purposes are to be used in detection of allergen, wash proteins off their surfaces by washing with an alkaline detergent before use.

Storage and expiration date

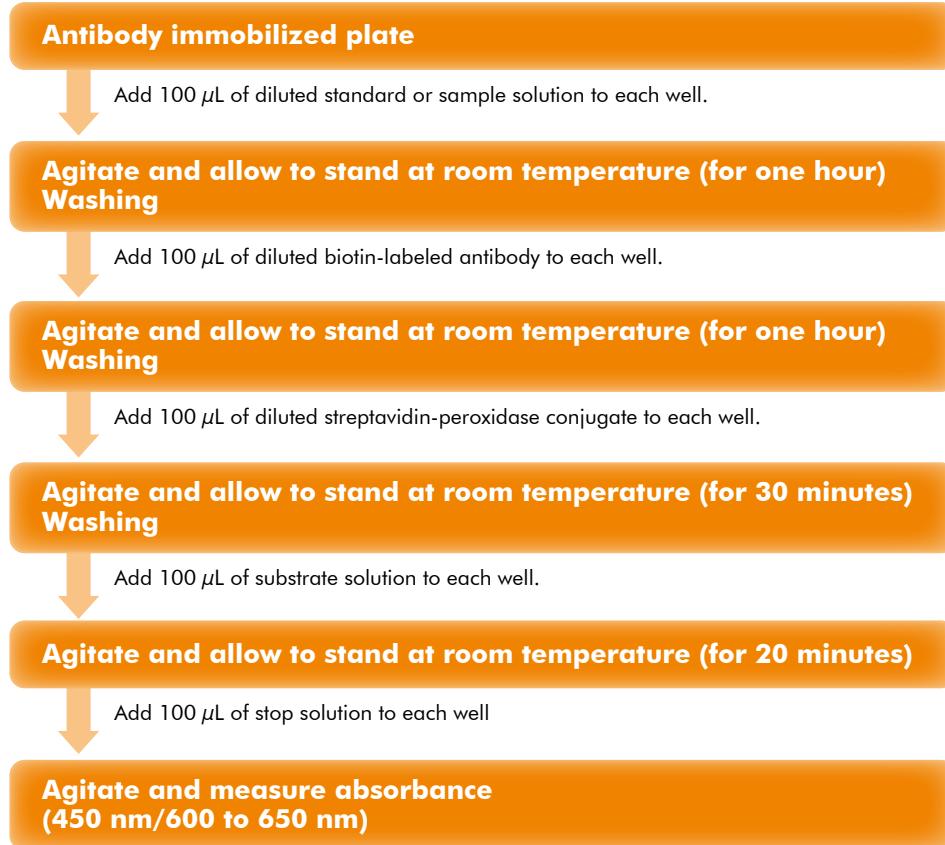

- 1) Storage: Store at refrigerated temperature (2 to 8°C) under protection from the light. Avoid freezing.
- 2) Expiration date: 6 months from the date of manufacture.

Test Kits for Food Allergens

FASTKIT Slim

- Screen samples for food allergen in 15 minutes.
- Reliable detection with simple handling.
- Clear interpretation of the results.
- Used widely in Japan.

Principle of assay

1. When a sample solution is applied to the sample application zone of the test strip, it is wicked through reagent zone.
2. Proteins of target allergen (1) in the sample binds to the colloidal gold-labeled antibody (2) in the reagent zone.
3. The allergen-antibody complex flows through the nitrocellulose membrane which contains a zone of antibody specific to target allergen.
4. The immune complex is captured and concentrated in the zone (test zone) (3), eventually forms a reddish purple line.
5. The membrane also contains a control zone where the gold-labeled antibody is captured.
6. The control line forms in the control zone (4) regardless of the presence of allergen proteins in the sample solution. The control line ensures the test is working correctly.

Objective/performance

- Intended for qualitative detection of allergen proteins in food products or solution
- Sample solution containing allergen at ≥ 25 ng/mL yields positive result

Kit contents

| | |
|--|---------------------------|
| A : Test strip | 2 tests \times 10 packs |
| B : Dilution Buffer | 1 |
| C : Extraction buffer concentrate (10 \times concentrated) | 1 |
| D : Instruction manual | 1 |
| E : Plastic bag with zipper | 1 |

Additionally required materials and instruments

[1: Food samples]

Utensils to homogenize sample (grinder, mixer mill, homogenizer, etc.), balance 50 mL plastic centrifuge tubes (with cup) centrifuge (recommended: capable of $\geq 3,000 \times g$ at 4°C), sedimentation tubes, filter paper, funnel, graduated cylinder, beaker, micropipettes, disposable tips, etc.

Note) To prevent contamination, wash the instruments to be used in the test thoroughly before use. Make sure to wash off proteins on the surfaces of homogenizers. (Washing with neutral detergent should be followed by overnight soaking or ultrasonic cleaning in alkaline detergent.)

[2: Surfaces]

Test tube, swab, swabbing solution, etc.

Note) 1) Users may use swabbing kits for microbiological tests. Users should refer to the composition of the solution provided with the kit to find it applicable or not.
 2) Do not use the buffers provided with the kit (dilution buffer, extraction buffer) as swabbing solution. Avoid contamination of the manufacturing machines and devices by those buffers.
 3) Sensitivity can vary depending on the amount of the swabbing solution. Recommended minimum volume of the swabbing solution is 1 mL. The users should determine the optimal volume of swabbing solution.

Storage and expiration date

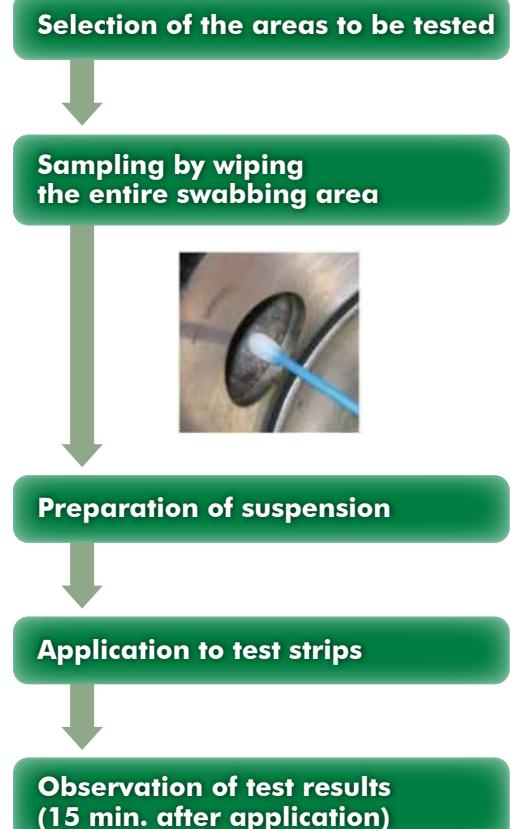

- 1) Storage: Store at refrigerated temperature (2 to 8°C) under protection from the light. Avoid freezing.
- 2) Expiration date: 12 months from the date of manufacture.

Test procedures

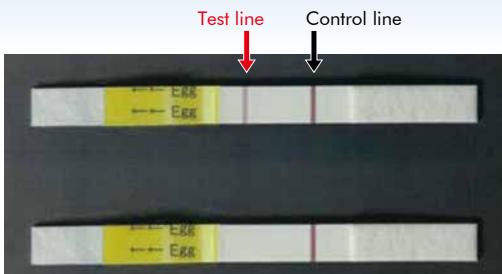

Food samples

Surfaces

Interpretation of the test results

Positive results: Reddish purple lines appear in the test zone and the control zone in 15 minutes after application of sample solutions.

Negative results: A reddish purple line appears in the control zone.

*Invalid results: No reddish purple line appears in the control zone.

FASTKIT slim

Immunoaffinity column for aflatoxin

MycoCatch total Aflatoxin

- Applicable to a wide range of food products such as grains, nuts, seeds, fruits, legumes, spices and processed foods.
- Excellent organic solvent tolerance: crude extracts containing high concentration of organic solvent (up to 40% methanol or 10% acetonitrile) can be purified.
- Superior liquid permeability and excellent recovery enable high yield in short operating time.
- Capable of purification of aflatoxins B₁, B₂, G₁, G₂, and M₁.

Principle of assay

- The crude extract is applied to the column.
- Aflatoxins in the crude extract bind to the anti-aflatoxin antibody-conjugated gel in the column and thus the aflatoxins are retained in the column. Impurities in the crude extract pass through without binding to the gel.
- Washing the column with purified water removes impurities further.
- An organic solvent is applied to the column to denature the antibody and aflatoxins are eluted.
- A purified and concentrated aflatoxin solution is obtained.

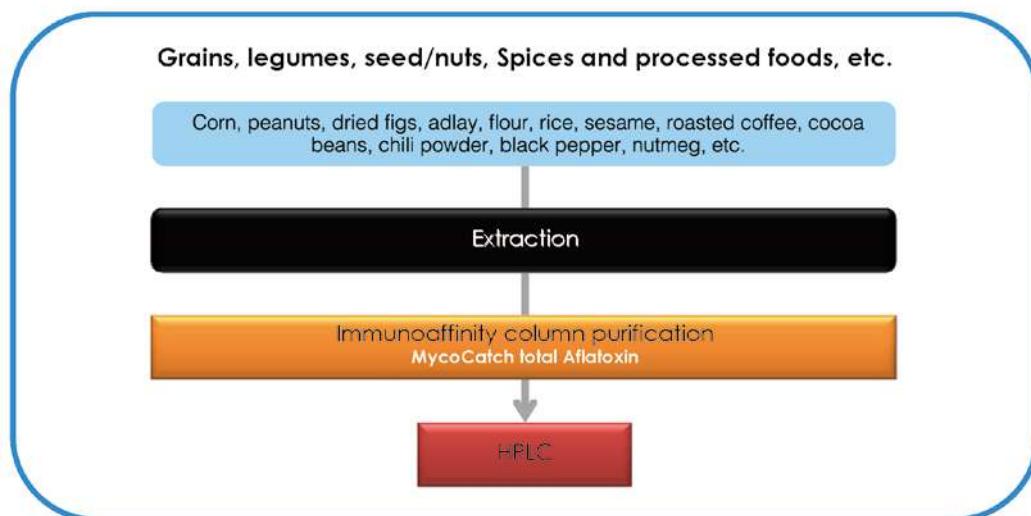

Kit contents

A : Anti-aflatoxin monoclonal antibody-conjugated gel packed column 5columns × 4packs

Storage and expiration date

- Storage: Store at refrigerated temperature (2 to 8°C). Avoid freezing.
- Expiration date: 12 months from the date of manufacture.

MycoCatch total Aflatoxin

| Product | Storage | Package Size | Wako Cat. No. |
|---------------------------|---------|--------------|---------------|
| MycoCatch total Aflatoxin | 2-10°C | 20 units | 389-02401 |

Pesticide Mixture Standard Solutions

| Product Name | Test components | Storage | Analysis equipment | Pkg.Size | Wako Cat.No. |
|--|-----------------|---------|--------------------|-------------------|------------------------|
| Pesticide Mixture Standard Solution PL-1-2 (20µg/mL each in acetone solution) | 31 | -20°C | GC/MS | 1 mL × 5A 1 mL | 161-26643 165-26641 |
| Pesticide Mixture Standard Solution PL-2-1 (20µg/mL each in acetone solution) | 31 | -20°C | GC/MS | 1 mL × 5A 1 mL | 168-22971 164-22973 |
| Pesticide Mixture Standard Solution PL-3-3 (20µg/mL each in acetone solution) | 27 | -20°C | GC/MS | 1 mL × 5A 1 mL | 162-26673 166-26671 |
| Pesticide Mixture Standard Solution PL-4-2 (20µg/mL each in acetone solution) | 36 | -20°C | GC/MS | 1 mL × 5A 1 mL | 166-24591 162-24593 |
| Pesticide Mixture Standard Solution PL-5-1 (20µg/mL each in acetone solution) | 37 | -20°C | GC/MS | 1 mL × 5A 1 mL | 169-23001 165-23003 |
| Pesticide Mixture Standard Solution PL-6-3 (20µg/mL each in acetone solution) | 35 | -20°C | GC/MS | 1 mL × 5A 1 mL | 169-24601 165-24603 |
| Pesticide Mixture Standard Solution PL-7-2 (20µg/mL each in acetone solution) | 29 | -20°C | LC/MS | 1 mL × 5A 1 mL | 163-23021 169-23023 |
| Pesticide Mixture Standard Solution PL-8-1 (20µg/mL each in acetone solution) | 21 | -20°C | LC/MS | 1 mL × 5A 1 mL | 160-23031 166-23033 |
| Pesticide Mixture Standard Solution PL-10-1 (20µg/mL each in acetone solution) | 9 | -20°C | GC/MS | 1 mL × 5A 1 mL | 164-23051 160-23053 |
| Pesticide Mixture Standard Solution PL-12-1 (20µg/mL each in acetone solution) | 26 | -20°C | GC/MS | 1 mL × 5A 1 mL | 161-23941 167-23943 |
| Pesticide Mixture Standard Solution PL-13-1 (20µg/mL each in acetone solution) | 15 | -20°C | GC/MS | 1 mL × 5A 1 mL | 168-23951 164-23953 |
| Pesticide Mixture Standard Solution PL-14-2 (20µg/mL each in acetone solution) | 30 | -20°C | LC/MS | 1 mL × 5A 1 mL | 165-23961 161-23963 |
| Pesticide Mixture Standard Solution PL-15-1 (20µg/mL each in acetone solution) | 28 | -20°C | LC/MS | 1 mL × 5A 1 mL | 162-23971 168-23973 |
| Pesticide Mixture Standard Solution PL-16-2 (20µg/mL each in acetone solution) | 30 | -20°C | LC/MS | 1 mL × 5A 1 mL | 169-23981 165-23983 |
| Pesticide Mixture Standard Solution PL-17-2 (20µg/mL each in acetone solution) | 29 | -20°C | LC/MS | 1 mL × 5A 1 mL | 168-23691 164-23693 |
| Veterinary Drug Mixture Standard Solution PL-1-3 (20µg/mL each in methanol solution) | 21 | -20°C | LC/MS | 1 mL × 5A 1 mL | 220-01681 226-01683 |
| Veterinary Drug Mixture Standard Solution PL-2-1 (20µg/mL each in methanol solution) | 24 | -20°C | LC/MS | 1 mL × 5A 1 mL | 227-01691 223-01693 |

The composition of these products are based on multiresidue methods notified by MHLW on November 29, 2005.

| Examples of products combination for Multiresidue Method | Corresponding Products (Brevity Code) |
|---|---|
| Multiresidue Method for Agricultural Chemicals by GC/MS (Agricultural Products) | Pesticide/PL-1, 2, 3, 4, 5, 6, 11, 12 |
| Multiresidue Method for Agricultural Chemicals by GC/MS (Animal and Fishery Products) [muscle, fat, liver, kidney, and fishery products] | Pesticide/PL-1, 2, 3, 9, 11, 12, 13 |
| Multiresidue Method for Agricultural Chemicals by GC/MS (Animal and Fishery Products) [milk, egg and honey] | Pesticide/PL-1, 2, 3, 9, 10, 11, 12, 13 |
| Multiresidue Method I for Agricultural Chemicals by LC/MS (Agricultural Products). | Pesticide/PL-7, 14, 15 |
| Multiresidue Method II for Agricultural Chemicals by LC/MS (Agricultural Products). | Pesticide/PL-8, 16 |
| Multiresidue Method for Agricultural Chemicals by LC/MS (Animal and Fishery Products) [muscle, fat, liver, kidney, and fishery products] | Pesticide/PL-7, 15, 17 |
| Multiresidue Method for Agricultural Chemicals by LC/MS (Animal and Fishery Products) [milk, egg and honey] | Pesticide/PL-7, 15, 17 |
| Multiresidue Method I for Veterinary Drugs, etc. by HPLC (Animal and Fishery Products) | Veterinary/PL-1, -2 |
| Multiresidue Method II for Veterinary Drugs, etc. by HPLC (Animal and Fishery Products) | Veterinary/PL-2 |
| Multiresidue Method III for Veterinary Drugs, etc. by HPLC (Animal and Fishery Products) | Veterinary/PL-2 |

Test component List

Pesticide Mixture Standard Solution PL-1-2 (20µg/mL each in acetone solution)

| No. | Component Name | No. | Component Name | No. | Component Name | No. | Component Name | No. | Component Name |
|-----|----------------------|-----|----------------------|-----|---------------------|-----|-------------------|-----|----------------|
| 1 | Omethoate | 8 | Chlorpyrifos-methyl | 15 | Procymidone | 22 | Norflurazon | 29 | Cyfluthrin |
| 2 | Trifluralin | 9 | Terbutryn | 16 | Methidathion (DMTP) | 23 | Diflufenican | 30 | Flucythrinate |
| 3 | Dimethoate | 10 | Benthiocarb | 17 | Fenamiphos | 24 | Bifenthrin | 31 | Fluvalinate |
| 4 | Atrazine | 11 | Malathion (Malathon) | 18 | Oxadiazon | 25 | Azinphos-methyl | | |
| 5 | Terbufos | 12 | Fenpropimorph | 19 | Kresoxim-methyl | 26 | Fenarimol (Bloc) | | |
| 6 | Tefluthrin (frebane) | 13 | Pendimethalin | 20 | Chlorfenapyr | 27 | trans -Permethrin | | |
| 7 | Spiroxamine | 14 | Penconazole | 21 | Pyrethrin I, II | 28 | cis -Permethrin | | |

Pesticide Mixture Standard Solution PL-2-1 (20µg/mL each in acetone solution)

| No. | Component Name | No. | Component Name | No. | Component Name | No. | Component Name | No. | Component Name |
|-----|-------------------|-----|-------------------------|-----|--------------------------|-----|-------------------|-----|----------------|
| 1 | Propoxur (PHC) | 8 | Fenitrothion (MEP) | 15 | Tetrachlorvinphos (CVMP) | 22 | Hexazinone | 29 | Fenbuconazole |
| 2 | Carbofuran | 9 | Metolachlor | 16 | Isoprotiolane | 23 | Propargite (BPPS) | 30 | Fluridone |
| 3 | Quintozone (PCNB) | 10 | Fenthion (MPP) | 17 | Myclobutanil | 24 | Phosmet (PMP) | 31 | Difenoconazole |
| 4 | Propyzamide | 11 | Isofenphos Oxon | 18 | Buprofezin | 25 | Methoxychlor | | |
| 5 | Triallate | 12 | Chlorfenvinphos (E-,Z-) | 19 | Cyproconazole | 26 | Pyriproxyfen | | |
| 6 | Vinclozolin | 13 | Isofenphos | 20 | Ethion | 27 | Pyraclofos | | |
| 7 | Alachlor | 14 | Triadimenol | 21 | Propiconazole | 28 | Fluquinconazole | | |

Pesticide Mixture Standard Solution PL-3-3 (20µg/mL each in acetone solution)

| No. | Component Name | No. | Component Name | No. | Component Name | No. | Component Name | No. | Component Name |
|-----|------------------------|-----|--------------------------|-----|-----------------|-----|------------------|-----|----------------|
| 1 | Ethoprop (Ethoprophos) | 7 | Chlorpyrifos | 13 | Profenofos | 19 | Acetamiprid | 25 | Cypermethrin |
| 2 | Simazine (CAT) | 8 | Parathion | 14 | Oxyfluorfen | 20 | Phenisobromolate | 26 | Fenvalerate |
| 3 | Diazinon | 9 | Triadimefon | 15 | Chlorobenzilate | 21 | Fenpropothrin | 27 | Deltamethrin |
| 4 | Propanil (DCPA) | 10 | Allethrin (Bioallethrin) | 16 | Triazophos | 22 | Cyhalothrin | | |
| 5 | Methylparathion | 11 | Fipronil | 17 | Quinoxifen | 23 | Bitertanol | | |
| 6 | Pirimiphos-methyl | 12 | Flutolanil | 18 | Tebuconazole | 24 | Pyridaben | | |

Pesticide Mixture Standard Solution PL-4-2 (20µg/mL each in acetone solution)

| No. | Component Name | No. | Component Name | No. | Component Name | No. | Component Name | No. | Component Name |

Simultaneous LC/MS/MS analysis of pesticides under positive list system

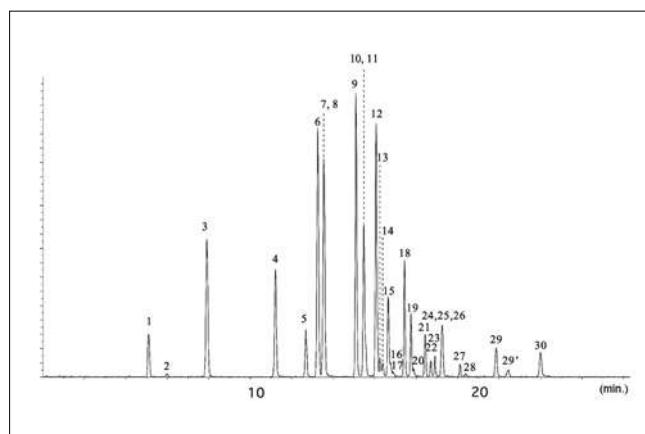

Pesticide mixture standard solution PL-7-2

[Pos. mode: 29 components]
[Column : Wakopak® Wakosil-II 3C18 HG]

[Analytical columns]

Pesticide Mixture Standard Solution L-14-2

[Pos. mode: 30 components]
[Column : Wakopak® Wakosil-II 3C18 HG]

| Product Name | Column Type | Size | Wako Cat.No. |
|-----------------------------|---------------|------------|------------------------|
| Wakopak® Wakosil-II 3C18 HG | DuPont Waters | 2.0×150 mm | 231-50241 237-50243 |

Veterinary Drug Mixture Standard Solution

Veterinary drugs used for prevention and treatment of diseases in livestock can remain in the livestock meat, thereby posing a risk to humans consuming the meat.

| Product Name | Test components | Storage | Grade | Pkg. Size | Wako Cat.No. |
|--|-----------------|---------|--|-------------------|------------------------|
| Veterinary Drug Mixture Standard Solution (Quinolone) (20µg/mL each) | 13 | -20°C | for High Performance Liquid Chromatography | 1 mL × 5A 1 mL | 223-02053 227-02051 |
| Veterinary Drug Mixture Standard Solution (Sulfonamide+Antifolate) (20µg/mL each) | 27 | -20°C | for High Performance Liquid Chromatography | 1 mL × 5A 1 mL | 224-02083 228-02081 |
| Veterinary Drug Mixture Standard Solution (Macrolide) (20µg/mL each in acetonitrile solution) | 7 | -20°C | for High Performance Liquid Chromatography | 1 mL × 5A 1 mL | 221-02093 225-02091 |
| Veterinary Drug Mixture Standard Solution (Dye) (20µg/mL each in methanol solution) | 3 | -20°C | for High Performance Liquid Chromatography | 1 mL × 5A 1 mL | 224-02103 228-02101 |
| Veterinary Drug Mixture Standard Solution (Hormone) (20µg/mL each in acetonitrile solution) | 6 | -20°C | for High Performance Liquid Chromatography | 1 mL × 5A 1 mL | 224-02201 220-02203 |

Test component List

Veterinary Drug Mixture Standard Solution (Quinolone) (20µg/mL each)

| No. | Component Name |
|-----|----------------|-----|----------------|-----|----------------|-----|----------------|-----|----------------|
| 1 | Marbofloxacin | 4 | Ciprofloxacin | 7 | Orbifloxacin | 10 | Oxolinic acid | 13 | Piromidic acid |
| 2 | Norfloxacin | 5 | Danofloxacin | 8 | Sarafloxacin | 11 | Nalidixic acid | | |
| 3 | Oflloxacin | 6 | Enrofloxacin | 9 | Difloxacin | 12 | Flumequine | | |

Veterinary Drug Mixture Standard Solution (Sulfonamide+Antifolate) (20µg/mL each)

| No. | Component Name | No. | Component Name | No. | Component Name | No. | Component Name | No. | Component Name |
|-----|----------------|-----|--------------------|-----|------------------------|-----|-----------------------|-----|---------------------|
| 1 | Sulfanilamide | 7 | Ormetoprim | 13 | Sulfadimidine | 19 | Sulfadoxine | 25 | Sulfaquinoxaline |
| 2 | Sulfacetamide | 8 | Sulfathiazole | 14 | Sulfamethoxypyridazine | 20 | Sulfatroxazole | 26 | Sulfanitran |
| 3 | Diaveridine | 9 | Sulfaipyridine | 15 | Pyrimethamine | 21 | Sultaethoxypyridazine | 27 | Sulfabromomethazine |
| 4 | Sulfisomidine | 10 | Sulfamerazine | 16 | Sultamonometroxine | 22 | Sulfisoxazole | | |
| 5 | Sulfadiazine | 11 | Sulfisozole | 17 | Sulfachlorypyridazine | 23 | Sulfabenzamide | | |
| 6 | Trimethoprim | 12 | Sulfametoxydiazine | 18 | Sulfamethoxazole | 24 | Sulfadimethoxine | | |

Veterinary Drug Mixture Standard Solution (Macrolide) (20µg/mL each in acetonitrile solution)

| No. | Component Name |
|-----|----------------|-----|----------------|-----|----------------|-----|---------------------------|
| 1 | Neospiramycinl | 3 | Tilmicosin | 5 | Tylosin | 7 | Leucomysin A ₅ |
| 2 | Spiramycinl | 4 | Erythromycin A | 6 | Tiamulin | | |

Veterinary Drug Mixture Standard Solution (Dye) (20µg/mL each in methanol solution)

| No. | Component Name | No. | Component Name | No. | Component Name |
|-----|----------------|-----|----------------|-----|-----------------|
| 1 | Methylene blue | 2 | Crystal violet | 3 | Brilliant green |
| | | | | | |

Veterinary Drug Mixture Standard Solution (Hormone) (20µg/mL each in acetonitrile solution)

| No. | Component Name | No. | Component Name | No. | Component Name | No. | Component Name |
|-----|--------------------|-----|----------------|-----|----------------|-----|----------------|
| 1 | Prednisolone | 3 | β-Trenbolone | 4 | α-Trenbolone | 5 | Zeranol |
| 2 | Methylprednisolone | | | | | 6 | Clotestabol |

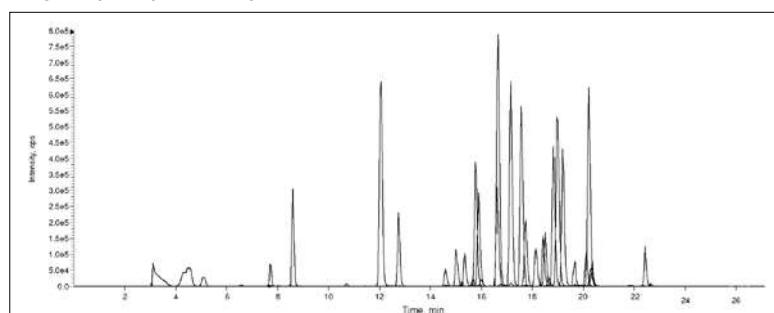

Organophosphorus Pesticide Mixture Standard Solution [FA series]

Organophosphorus pesticides have been detected in imported frozen goods.

| Product Name | Test components | Storage | Grade | Pkg. Size | Wako Cat.No. |
|---|-----------------|---------|--------------------------------|-----------|--------------|
| Organophosphorus Pesticide Mixture Standard Solution FA-1 (20µg/mL each) | 24 | -20°C | for Pesticide Residue Analysis | 1 mL | 152-02931 |
| Organophosphorus Pesticide Mixture Standard Solution FA-2 (20µg/mL each) | 22 | -20°C | for Pesticide Residue Analysis | 1 mL | 159-02941 |
| Organophosphorus Pesticide Mixture Standard Solution FA-3 (20µg/mL each in acetone solution) | 10 | -20°C | for Pesticide Residue Analysis | 1 mL | 156-02951 |

Simultaneous LC/MS/MS analysis of organophosphorous pesticides

Organophosphorous pesticide mixture standard solution FA Series

[Column : Wakopak® Wakosil-II 3C18 HG]

Analytical columns

| Product Name | Column Type | Size | Wako Cat.No. |
|-----------------------------|---------------|------------|------------------------|
| Wakopak® Wakosil-II 3C18 HG | DuPont Waters | 2.0×150 mm | 231-50241 237-50243 |

Test component List

Organophosphorus Pesticide Mixture Standard Solution FA-1 (20µg/mL each)

| No. | Component Name | No. | Component Name | No. | Component Name | No. | Component Name | No. | Component Name |
|-----|-------------------|-----|---------------------|-----|-----------------------------|-----|-----------------------------|-----|--------------------|
| 1 | DDVP (Dichlorvos) | 6 | Diazinon | 11 | (E)-Dimethylvinphos | 16 | β-CVP [(Z)-Chlorfenvinphos] | 21 | EDDP (Edifenphos) |
| 2 | Methamidophos | 7 | IBP (Iprobenfos) | 12 | Malathion | 17 | Fosthiazate | 22 | CYP (Cyanofenphos) |
| 3 | Acephate | 8 | CYAP (Cyanophos) | 13 | (Z)-Dimethylvinphos | 18 | Propaphos | 23 | Pyridaphenthion |
| 4 | Cadusafos | 9 | Chlorpyrifos-methyl | 14 | α-CVP [(E)-Chlorfenvinphos] | 19 | Profenofos | 24 | Phosalone |
| 5 | Salithion | 10 | Pirimiphos-methyl | 15 | Quinalphos | 20 | Ethion | | |

Organophosphorus Pesticide Mixture Standard Solution FA-2 (20µg/mL each)

| No. | Component Name | No. | Component Name | No. | Component Name | No. | Component Name | No. | Component Name |
|-----|----------------|-----|----------------------|-----|--------------------|-----|---------------------|-----|----------------|
| 1 | Ethoprophos | 6 | ECP (Dichlofenthion) | 11 | MPP (Fenthion) | 16 | DMTP (Methidathion) | 21 | PMP (Phosmet) |
| 2 | Phorate | 7 | Dimethoate | 12 | MEP (Fenitrothion) | 17 | Butamifos | 22 | Pyraclofos |
| 3 | Thiometon | 8 | Tolclofos-methyl | 13 | Isofenphos | 18 | Sulprofos | | |
| 4 | Terbufos | 9 | Chlorpyrifos | 14 | PAP (Phentoate) | 19 | Fensulfothion | | |
| 5 | Etrimfos | 10 | Formothion | 15 | Prothiofos | 20 | EPN | | |

Organophosphorus Pesticide Mixture Standard Solution FA-3 (20µg/mL each in acetone solution)

| No. | Component Name | No. | Component Name | No. | Component Name | No. | Component Name | No. | Component Name |
|-----|------------------------------|-----|-----------------|-----|----------------|-----|-----------------|-----|----------------|
| 1 | Omethoate | 3 | Monocrotophos | 5 | Fenamiphos | 7 | Vamidothion | 9 | Azinphos-ethyl |
| 2 | Ethylthiomethon (Disulfoton) | 4 | Bromophos-ethyl | 6 | Isoxathion | 8 | Azinphos-methyl | 10 | Coumaphos |

TraceSure, Traceable Reference Material

TraceSure is an agricultural chemical reference substance for volumetric analysis. It is a certified reference material that has obtained ASNITE (Guide34) at Wako. It is harmonized to the international MRA of APLAC.

TraceSure

| Product Name | Storage | Grade | Pkg.Size | Wako Cat.No. |
|---------------------------------------|---------|-----------|----------|--------------|
| Acephate Reference Material | 2-10°C | TraceSure | 100 mg | 010-23681 |
| Alachlor Reference Material | 2-10°C | TraceSure | 100 mg | 011-24211 |
| Anilofos Reference Material | 2-10°C | TraceSure | 100 mg | 013-23671 |
| Asulam Reference Material | 2-10°C | TraceSure | 100 mg | 016-23661 |
| Atrazine Reference Material | 2-10°C | TraceSure | 100 mg | 019-23651 |
| Bensulfuron-methyl Reference Material | 2-10°C | TraceSure | 100 mg | 024-17271 |
| Bensulide Reference Material | 2-10°C | TraceSure | 100 mg | 021-17301 |
| Bentazone Reference Material | 2-10°C | TraceSure | 100 mg | 025-17681 |
| Benthiocarb Reference Material | 2-10°C | TraceSure | 100 mg | 023-17241 |
| Bethrodine Reference Material | 2-10°C | TraceSure | 100 mg | 028-17291 |
| Bifenox Reference Material | 2-10°C | TraceSure | 100 mg | 027-17261 |
| Bifenthrin Reference Material | 2-10°C | TraceSure | 100 mg | 021-17661 |
| BPMC Reference Material | 2-10°C | TraceSure | 100 mg | 020-17251 |
| Butamifos Reference Material | 2-10°C | TraceSure | 100 mg | 028-17671 |
| Carbofuran Reference Material | 2-10°C | TraceSure | 100 mg | 037-22571 |
| Carboxin Reference Material | 2-10°C | TraceSure | 100 mg | 031-23331 |
| CAT Reference Material | 2-10°C | TraceSure | 100 mg | 030-22561 |
| Chlorfenapyr Reference Material | 2-10°C | TraceSure | 100 mg | 039-22531 |
| Chlorfluazuron Reference Material | 2-10°C | TraceSure | 100 mg | 037-22071 |
| Chloro IPC Reference Material | 2-10°C | TraceSure | 100 mg | 033-22551 |
| Chloroneb Reference Material | 2-10°C | TraceSure | 100 mg | 036-22041 |
| Clothianidin Reference Material | 2-10°C | TraceSure | 100 mg | 034-22581 |
| CNP-amino Reference Material | 2-10°C | TraceSure | 100 mg | 036-22541 |
| Coumaphos Reference Material | 2-10°C | TraceSure | 100 mg | 030-22061 |
| Cumyluron Reference Material | 2-10°C | TraceSure | 100 mg | 033-22051 |
| Cymoxanil Reference Material | 2-10°C | TraceSure | 100 mg | 032-22521 |
| Cyprodinil Reference Material | 2-10°C | TraceSure | 100 mg | 034-22081 |
| Daminozide Reference Material | 2-10°C | TraceSure | 100 mg | 042-32451 |
| DCMU Reference Material | 2-10°C | TraceSure | 100 mg | 049-31861 |
| DEP Reference Material | 2-10°C | TraceSure | 100 mg | 041-31681 |
| Diazinon Reference Material | 2-10°C | TraceSure | 100 mg | 040-31891 |
| Diflubenzuron Reference Material | 2-10°C | TraceSure | 100 mg | 043-31901 |
| Dimepiperate Reference Material | 2-10°C | TraceSure | 100 mg | 043-31881 |
| Dithiopyr Reference Material | 2-10°C | TraceSure | 100 mg | 046-31871 |
| Echlomezol Reference Material | 2-10°C | TraceSure | 100 mg | 057-08251 |
| EPN Reference Material | 2-10°C | TraceSure | 100 mg | 050-08241 |
| Espocarb Reference Material | 2-10°C | TraceSure | 100 mg | 051-08271 |
| Etofenprox Reference Material | 2-10°C | TraceSure | 100 mg | 053-08231 |
| Ethylthiometon Reference Material | 2-10°C | TraceSure | 100 mg | 053-08731 |
| Famoxadone Reference Material | 2-10°C | TraceSure | 100 mg | 066-05841 |

Traceable Reference Material (TRM)

TRM series: A traceable reference material evaluated by the National Metrology Institute of Japan (NMIJ) of the National Institute of Advanced Industrial Science and Technology and established for uncertainty at Wako. The purity of this product is guaranteed through quantitative NMR.

Solvents for Pesticide Residue and PCB Analysis

These products ensure safety as each contains no interfering substances in the 300-fold or 5000-fold concentrated solution, and are ideal for the extraction of pesticides from the test substances and for purification.

The 300- and 5000-fold concentrated solution guarantee the followings :

1 With the GC-ECD, the level of impurities does not exceed 1/2 of the peak of the organochlorine pesticide γ-BHC (20pg).

2 With GC-FPC, the level of impurities does not exceed 1/25 of the peak of the organophosphorous pesticide MPP (0.5ng)

Solid-Phase Extraction Columns; Presep® Series

The solid-phase extraction method for pretreatment of samples is used widely in various fields, including pharmaceutical, food and environmental analyses, because the method is simple and uses smaller amounts of solvents.

In addition, the method has various advantages, for example, it can treat many samples simultaneously in a short time.

Features

1. The columns can be used for solid-phase extraction by any of the compression and decompression methods. (Presep®-C Type)
2. Some columns can be connected depending on the kind and amount of filler. (Presep®-C Type)
3. High flow velocity obtained by the sharp filler particle size distribution.
4. High recovery realized by the fillers designed for solidphase extraction.
5. High reproducibility ensured by strict quality control.

QuEChERS Extraction Tube

The "QuEChERS" (Quick, Easy, Cheap, Effective, Rugged, and Safe) method for solid phase extraction is becoming an increasingly popular way of preparing sample, especially for the analysis of agrochemical residue in food products. This product is a 50 mL centrifuge tube complete with the exact amount of reagent required, and been approved for acetate buffer extraction for the AOAC official method 2007.01 for analyzing pesticide residues in foods.

Composition (per tube): magnesium sulfate 6 g, anhydrous sodium acetate 1.5 g

for Analysis of Food Components and Additives

Dietary Fiber Assay Kit

A simple and modified version of Prosky's method. Compared to conventional Prosky's method, it assures high measurement accuracy. Furthermore, enzyme treatment time is shortened.

Operation Procedure

1. Addition of Sample
2. Digestion with thermostable α -amylase
3. Wash the Beaker and Cool it
4. Digestion with protease and amyloglucosidase
5. Ethanol Precipitation
6. Filtration
7. Wash
8. Drying and Weighing
9. Protein Determination
10. Ash Determination
11. Calculation of Total Dietary Fiber Content

Kit Contents:

- Thermostable alpha-Amylase Solution (20 mL × 1 vial)
- Protease Solution (20 mL × 1 vial)
- Amyloglucosidase Solution (20 mL × 1 vial)
- Diatomaceous Earth (100 g × 1 vial)

■ for Stevioside Determination

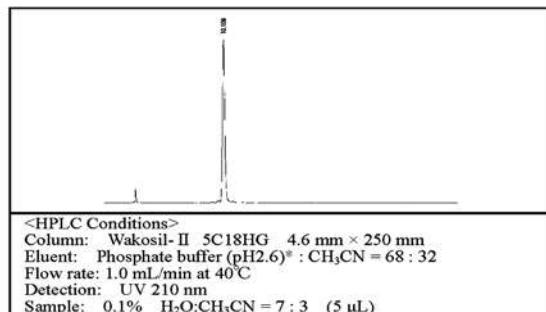

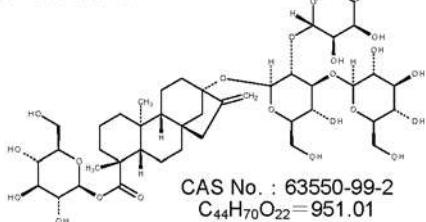

Stevia rebaudiana (Stevia) is a plant native to South America. The leaf of the Stevia plant contains sweet components, called steviol and steviol glycosides which includes Stevioside, Dulcoside A, Rebaudioside A, B, C, D, F and others. There are also listed as Steviol Glycosides in JECFA Monographs. They have been used as sweeteners around the world. Wako can provide the highly purified products and they can be used for determination of the steviol glycosides.

■ Standards of Melamine and the related compounds

Melamine occurs as monoclinic crystals and is used mainly as a raw material of melamine resin for decorative sheet, molded plateware, molded machines and electric parts, baking paint, and textile processing agent. After the case of melamine contamination in pet foods in the U.S. in 2007, the Ministry of Health, Labour and Welfare has instructed to perform a monitoring test for proteins (including gluten) made from rice from China and wheat and for flour and powder prepared using flour.

Irradiated food testing reagent

This product consists of sodium polytungstate, used in thermoluminescence (TL). Using this product and dedicated equipment will allow for the detection of food items subjected to irradiation.

High-sealed Storage Bottles

These high-performance hermetic containers are ideal for storing volatile solvents, agrochemicals, dioxins, and other types of standard solutions. Specially designed to be completely airtight, the Perfluoro O-ring between the mouth and the cap ensures preventing swelling of the container affected by expansion and contraction due to temperature fluctuations and organic solvent vaporization. This enables long storage of various types of solvents at temperatures between ambient (room temperature) and the freezer (-20°C).

Features

- Provides 99+% hermeticity when organic solvents are stored at room temperature or at freezer temperature as low as -20°C, for up to three months.
- Comes in sizes of 1mL, 2mL, 5mL, and 10mL
- A microsyringe is available for drawing samples directly from the specially designed upper extraction cap

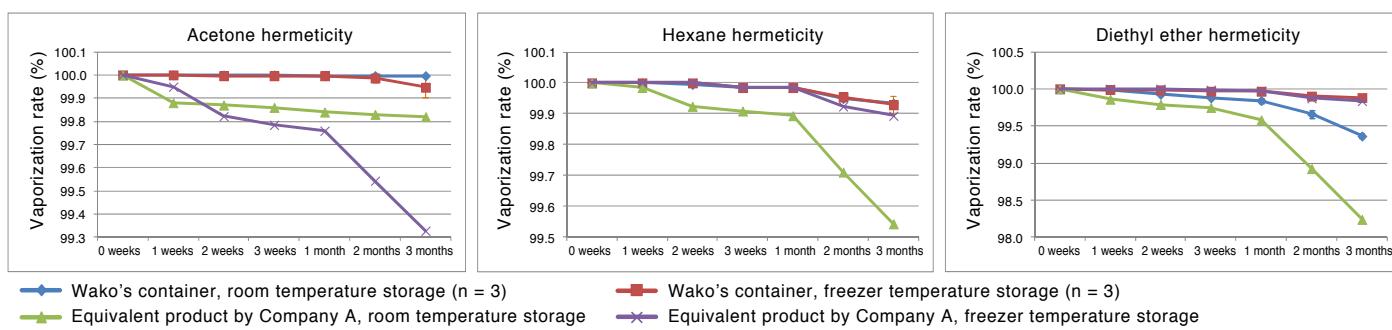

Applications

Storage of commercial standard solutions removed from ampoules
Long storage of reagent samples

Hermeticity tests for various solvents

Used Wako's high-performance hermetic containers (10mL) and their equivalent products by Company A (10mL). Added acetone, hexane, and diethyl ether (10mL each) respectively, sealed, and stored both at room temperature and at freezer temperature (-20°C). Measured the mass of each content at various intervals from a week to 3 months after the seal.

Reagents for Genetic Testing

Reagents for variety identification

■ mtDNA Extractor CT kit

This product is a kit designed to easily extract mitochondrial DNA (mtDNA) from the tissues or cells of mammalian species in a comparatively short period of time. This kit can also be used for the mtDNA extraction from compound feed.

Genetically Modified Organism (GMO) Qualitative Test Reagents

In April 2001, it became mandatory in Japan to openly display whether agricultural produce was genetically modified or processed goods included genetically modified ingredients, according to the good quality labelling system of JAS Law. Accordingly, the Ministry of Agriculture, Forestry and Fisheries released the JAS analytical test handbook, the 'Genetically Modified Food Inspection and Analysis Manual', the Consumer Affairs Agency released 'Inspection methods for recombinant DNA technology food that completed safety inspection', while the Ministry of Health, Labour and Welfare released the 'Inspection methods for food produced with recombinant DNA techniques'. Furthermore, in 2005, 'Detailed official and standard testing methods, standard methods of analysis in food safety regulation, Physical and chemical sciences edition 2005' was also published. This reagent conforms with all above methods.

Testing methods are outlined on the official Ministry of Agriculture, Forestry and Fisheries, Consumer Affairs Agency and Ministry of Health, Labour and Welfare websites.

GMO DNA Extraction Kit for Grain**■ GM quicker [DNA Extraction Kit for Grain (such as maize and soybean)]**

| Product Name | Storage | Pkg. Size | Wako Cat.No. |
|--------------|---------|-----------|--------------|
| GM quicker | 2-10°C | 50 Tests | 317-06361 |

■ GM quicker 2 [DNA Extraction Kit for Rice, Canola, and Potato]

| Product Name | Storage | Pkg. Size | Wako Cat.No. |
|-------------------------|---------|-----------|--------------|
| GM quicker 2 | 2-10°C | 50 Tests | 310-06591 |
| GM quicker 2 Enzyme Set | -20°C | 1 Set | 312-06671 |

■ GM quicker 3, GM quicker 4 [DNA Extraction Kit for processed food]

| Product Name | Storage | Pkg. Size | Wako Cat.No. |
|--------------|---------|-----------|--------------|
| GM quicker 3 | 2-10°C | 50 Tests | 311-07241 |
| GM quicker 4 | -20°C | 50 Tests | 316-07791 |

■ GM quicker 96 [DNA Extraction Kit for crushed corn seed]

| Product Name | Storage | Pkg. Size | Wako Cat.No. |
|---------------|---------|-----------|--------------|
| GM quicker 96 | RT | 384 Tests | 319-07161 |

■ On-Site Column Set for GM quicker

This product consists of two types of columns. By using this product in conjunction with the buffer of the GM quicker component, DNA can be quickly extracted and purified from grain seed.

In addition, high-purity DNA extraction can be conducted without having to use large-scale machinery (e.g., centrifuge).

| Product Name | Storage | Pkg. Size | Wako Cat.No. |
|-----------------------------------|---------|-------------|--------------|
| On-Site Column Set for GM quicker | 2-10°C | 20 Tests | 317-07341 |

| GW Buffer | RT | 40 mL × 2 | 311-06641 |
| GE2-K Buffer | RT | 100 mL | 318-06651 |
| GB3 Buffer | RT | 12.5 mL × 2 | 315-06661 |

Others

trans-Fatty Acid Analysis

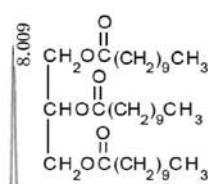

It is known that *trans*-fatty acid is produced by hydrogenation, etc., in the process of manufacture of hydrogenated oils such as margarine or shortening, etc. There are reports that the action of *trans*-fatty acid increases LDL cholesterol, known as bad cholesterol, and that continuing to ingest large quantities of *trans*-fatty acid increases the risk of ischemic heart disease due to arteriosclerosis, etc. Against this background, there are moves to investigate making it obligatory to label the content of *trans*-fatty acid in food in Japan too.

Capillary gas chromatography has been adopted as the provisional method * for the measurement of *trans*-fatty acid content in JOCS Standard Methods for the Analysis of Fats, Oils and Related Materials.

We handles the *trans*- substances methyl linolenate and α -methyl linolenate, which are useful in confirming the detection position of *trans*-fatty acids.

* Reference: JOCS Standard Methods for the Analysis of Fats, Oils and Related Materials: Provisional method 17-2007 *trans*-fatty acid content (capillary gas chromatography)

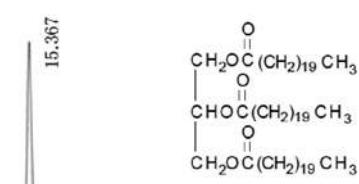

[Triundecanoin]

<HPLC Conditions>

Column : Wakopak Navi C18-5
4.6mm ϕ × 25cm
Column temp. : 40°C
Eluent : CH₃CN/CHCl₃=75/25
Flow rate : 1.0mL/min
Detector : CoronaCAD

[Triheneicosanoin]

<HPLC Conditions>

Column : Wakopak Navi C18-5
4.6mm ϕ × 25cm
Column temp. : 40°C
Eluent : CH₃CN/CHCl₃=55/45
Flow rate : 1.0mL/min
Detector : CoronaCAD
